May 11, 2021 · A digital single lens reflex, or DSLR camera, is a camera with an internal mirror and prism system. This system is used to direct the light from the lens up to the viewfinder that you look through to compose the image. I appreciate this may sound a little opaque, so let me break it down a bit. All digital cameras essentially work in the same way.

What Is a DSLR Camera? First of all, what does DSLR stand for? DSLR is the abbreviation for Digital Single Lens Reflex. Digital means that the camera operates with a fixed, digital sensor.. Single-lens means the camera uses the same lens for framing, focusing, and taking the photograph. This is different from rangefinder and twin-lens-reflex constructions.
