**David A. Morton, John L. Crawley**

*A Photographic Atlas for Anatomy & Physiology* Nora Hebert, Ruth Heisler, Karen Krabbenhoft, Jett Chinn, Olga Malakhova, 2014-10-14 For 2-semester A&P lab course and 1-semester human anatomy lab course A Photographic Atlas for Anatomy & Physiology is a new visual lab study tool that helps students learn and identify key anatomical structures. Featuring photos from Practice Anatomy Lab (TM) 3.1 and other sources, the Atlas includes over 250 cadaver dissection photos, histology photomicrographs, and cat dissection photos plus over 50 photos of anatomical models from leading manufacturers such as 3B Scientific(R), SOMSO(R), and Denoyer-Geppert Science Company. Two-page spreads with cadaver and anatomical model photos side-by-side help students to better learn and identify structures. The Atlas is composed of 13 chapters, organized by body system, and includes a final chapter with cat dissection photos. In each chapter, students will first explore gross anatomy, as seen on cadavers and anatomical models, and then conclude with relevant histological images.

A Photographic Atlas of Histology Michael J. Leboffe, 2013-01-01 A Photographic Atlas of Histology, 2e by Michael J. Leboffe is designed for use in undergraduate histology and human anatomy courses. It serves as a convenient visual reference and is of particular value to students in a laboratory setting. Commercially available microscope slides are used to photograph, so images represent the quality and diversity of what a student is actually likely to encounter in the laboratory; pathological specimens have not been used.

**Color Atlas of Anatomy** Johannes Wilhelm Rohen, Chihiro Yokochi, Elke Lütjen-Drecoll, 2011 This Color Atlas of Anatomy features full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures with a realism unmatched by illustrations in traditional atlases and show students specimens as they will appear in the dissection lab. Chapters are organized by region in order of standard dissection, with structures presented both in a systemic manner, from deep to surface, and in a regional manner. This edition has additional clinical imaging, including MRIs, CTs, and endoscopic techniques. New graphics include clinically relevant nerve and vessel varieties and antagonistic muscle functions. Many older images have been replaced with new, high-resolution images. Black-and-white dissection photographs have been replaced with color photography. A companion website

will include an Image Bank, interactive software (similar to an Interactive Atlas), and full text online.
