Bringing Chemistry to Life Robert Joseph Paton Williams, 1999

The Study of Change James Reardon-Anderson, 1991 When Western missionaries introduced modern chemistry to China in the 1860s, they called this discipline hua-hsueh, literally, 'the study of change'. In this first full-length work on science in modern China, James Reardon-Anderson describes the introduction and development of chemistry in China in the

late nineteenth and early twentieth centuries, and examines the impact of the science on language reform, education, industry, research, culture, society, and politics. Throughout the book, Professor Reardon-Anderson sets the advance of chemistry in the broader context of the development of science in China and the social and political changes of this era. His thesis is that science fared well at times when a balance was struck between political authority and free social development. Based on Chinese and English sources, the narrative moves from detailed descriptions of particular chemical processes and innovations to more general discussions of intellectual and social history, and provides a fascinating account of an important episode in the intellectual history of modern China.

Slow Death by Rubber Duck Rick Smith, Bruce Lourie, 2010-04-06 Funny, thought-provoking, and incredibly disturbing, *Slow Death by Rubber Duck* reveals that just the living of daily life creates a chemical soup inside each of us. Pollution is no longer just about belching smokestacks and ugly sewer pipes - now, it's personal. The most dangerous pollution has always come from commonplace items in our homes and workplaces. Smith and Lourie ingested and inhaled a host of things that surround all of us all the time. This book exposes the extent to which we are poisoned every day of our lives. For this book, over the period of a week - the kind of week that would be familiar to most people - the authors use their own bodies as the reference point and tell the story of pollution in our modern world, the miscreant corporate giants who manufacture the toxins, the weak-kneed government officials who let it happen, and the effects on people and families across the globe. Parents and concerned citizens will have to read this book. Key concerns raised in *Slow Death by Rubber Duck*: • Flame-retardant chemicals from electronics and household dust polluting our blood. • Toxins in our urine caused by leaching from plastics and run-of-the-mill shampoos, toothpastes and deodorant. • Mercury in our blood from eating tuna. • The chemicals that build up in our body when carpets and upholstery off-gas. Ultimately hopeful, the book empowers readers with some simple ideas for protecting themselves and their families, and changing things for the better.

The Golden Book of Chemistry Experiments Robert Brent, 2015-10-10 **BANNED:** *The Golden Book of Chemistry Experiments* was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, it's known as one of the best DIY chemistry books ever published. The book was a source of inspiration to David Hahn, nicknamed the Radioactive Boy Scout by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children who went on to get advanced degrees and productive chemical careers in industry or academia.

Talking to the Other Side Todd Jay Leonard, 2005 Since its birth in 1848, Spiritualism as a religion, science, and philosophy has experienced great highs and lows. At the center of this purely American-made modern-religious movement are mediums--the people who are able to communicate, in some way, with spirit entities that are no longer on the earth plane. Based on three years of on-site investigation, and a plethora of data and research collected on the modern Spiritualist movement in America, *Talking to the Other Side* focuses upon the ethno-religious aspects of the religion, mediumship, and the mediums themselves. The first four chapters offer an expansive review of the history of religion in America, mediumship, and the Spiritualist movement. Chapters 5-7 comprise the research and data that were compiled and analyzed based on fieldwork analysis, a comprehensive questionnaire, personal interviews, and published literature on the topic of Spiritualism and mediumship. According to Spiritualist mediums, people don't die, bodies do. *Talking to the Other Side* offers a

contemporary look into the lives and backgrounds of the mediums who bridge this world and the Spirit world, connecting those who have passed over with those they left behind.

From superconductors to the Big Bang, the best tales of scientific revelation are collected in *The Eureka! Moment*, an addictive tour through the modern world's key scientific discoveries. Rupert Lee's accounts transport readers to the moment of realization: the inventor's laboratory, his or her doubts, initial setbacks, feuds with other scientists, and finally the shock and excitement of triumph. Together, these biographies of inspiration paint an astonishing picture of human ingenuity. In physics we learn how scientists for Bell Labs inadvertently supplied proof for the Big Bang theory while trying to eliminate the background hiss in their microwave antenna. In astronomy we see Hubble's recognition that the universe is expanding, not static, as well as the fortuitous discovery of Pluto by a farm boy from Kansas. We join Watson and Crick as they decode the double helix of DNA, and Karl von Frisch as he deciphers the honeybee's waggle dance. Skillfully written to clarify concepts from quarks to relativity to antibodies for the lay reader, *The Eureka Moment* is a must-read for anyone interested in popular science and the history of invention.
