Cutting the Fuse Robert A. Pape, James K. Feldman, 2010-10-07 Cutting the Fuse offers a wealth of new knowledge about the origins of suicide terrorism and strategies to stop it. Robert A. Pape and James K. Feldman have examined every suicide terrorist attack worldwide from 1980 to 2009, and the insights they have gleaned from that data fundamentally challenge how we understand the root causes of terrorist campaigns today—and reveal why the War on Terror has been ultimately counterproductive. Through a close analysis of suicide campaigns by Al Qaeda and other terrorist organizations in Iraq, Afghanistan, Pakistan, Lebanon, Israel, Chechnya, and Sri Lanka, the authors provide powerful new evidence that, contrary to popular and dangerously mistaken belief, only a tiny minority of these attacks are motivated solely by religion. Instead, the root cause is foreign military occupation, which triggers secular and religious people alike to carry out suicide attacks. Cutting the Fuse calls for new, effective solutions that America and its allies can sustain for decades, relying less on ground troops in Muslim countries and more on offshore, over-the-horizon military forces along with political and economic strategies that empower local communities to stop terrorists in their midst.

Education for Life and Work National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Defining Deeper Learning and 21st Century Skills, 2013-01-18 Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same

time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as 21st century skills. Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum, assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.
