**I Think You're Wrong (But I'm Listening)** Sarah Stewart Holland, Beth Silvers, 2019-02-05 More than ever, politics seem to be driven by discord. People sitting together in pews every Sunday feel like strangers and loved ones at the dinner table feel like enemies. Toxic political dialogue, hate-filled rants on social media, and agenda-driven news stories have become the new norm. But it doesn't have to be this way. In *I Think You're Wrong (But I'm Listening)*, two working moms from opposite ends of the political spectrum teach us that politics don't have to divide us. Instead, we can bring the same care and respect to policy discussions that we bring to the rest of our lives. Sarah Stewart Holland and Beth Silvers, co-hosts of *Pantsuit Politics*, recently named an Apple Podcasts Show of the Year, give you all of the tools you need to: Respect the dignity of every person Recognize that issues are nuanced and can't be reduced to political talking points Listen in order to understand Lead with grace and patience Join Sarah from the left and Beth from the right as they teach you that people from opposing political perspectives truly can have calm, grace-filled conversations with one another. Praise for *I Think You're Wrong (But I'm Listening)*: Sarah and Beth are an absolute gift to our culture right now. Not only do they offer balanced perspectives from each political ideology, but they teach us how to dialogue well, without sacrificing our humanity. --Jen Hatmaker, New York Times bestselling author and speaker Sarah from the left and Beth from the right serve as our guides through conflict and complexity, delivering us into connection. I wish every person living in the United States would read this compelling book, from the youngest voter to those holding the highest office. --Emily P. Freeman, Wall Street Journal bestselling author of *The Next Right Thing*

Muncie 4-Speed Transmissions Paul Cangialosi, 2014-10-15 The Muncie 4-speeds, M20, M21, and M22 are some of the most popular manual transmissions ever made and continue to be incredibly popular. The Muncie was the top high-performance manual transmission GM offered in its muscle cars of the 60s and early 70s. It was installed in the Camaro, Chevelle, Buick GS, Pontiac GTO, Olds Cutlass, and many other classic cars. Many owners want to retain the original transmission in their classic cars to maintain its value. Transmission expert and veteran author Paul Cangialosi has created an indispensable reference to Muncie 4-speeds that guides you through each crucial stage of the rebuild process. Comprehensive ID information is provided, so you can positively identify the cases, shafts, and related parts. It discusses available models, parts options, and gearbox cases. Most important, it shows how to completely disassemble the gearbox, identify wear and damage, select the best parts, and complete the rebuild. It also explains how to choose the ideal gear ratio for a particular application. Various high-performance and racing setups are also shown, including essential modifications, gun drilling the shafts, cutting down the gears to remove weight, and achieving race-specific clearances. Muncie 4-speeds need rebuilding after many miles of service and extreme use. In addition, when a muscle car owner builds a high-performance engine that far exceeds stock horsepower, a stronger high-performance transmission must be built to

accommodate this torque and horsepower increase. No other book goes into this much detail on the identification of the Muncie 4-speed, available parts, selection of gear ratios, and the rebuild process.

*Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-duty Vehicles* National Research Council,National Research Council (U.S.). Committee on Assessment of Technologies and Approaches for Reducing the Fuel Consumption of Medium- and Heavy-duty Vehicles, Phase Two,Transportation Research Board,Division on Engineering and Physical Sciences,2014 Medium- and heavy-duty trucks, motor coaches, and transit buses - collectively, medium- and heavy-duty vehicles, or MHDVs - are used in every sector of the economy. The fuel consumption and greenhouse gas emissions of MHDVs have become a focus of legislative and regulatory action in the past few years. Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-Duty Vehicles, Phase Two is a follow-on to the National Research Council's 2010 report, Technologies and Approaches to Reducing the Fuel Consumption of Medium-and Heavy-Duty Vehicles. That report provided a series of findings and recommendations on the development of regulations for reducing fuel consumption of MHDVs. This report comprises the first periodic, five-year follow-on to the 2010 report. Reducing the Fuel Consumption and Greenhouse Gas Emissions of Medium- and Heavy-Duty Vehicles, Phase Two reviews NHTSA fuel consumption regulations and considers the technological, market and regulatory factors that may be of relevance to a revised and updated regulatory regime taking effect for model years 2019-2022. The report analyzes and provides options for improvements to the certification and compliance procedures for medium- and heavy-duty vehicles; reviews an updated analysis of the makeup and characterization of the medium- and heavy-duty truck fleet; examines the barriers to and the potential applications of natural gas in class 2b through class 8 vehicles; and addresses uncertainties and performs sensitivity analyses for the fuel consumption and cost/benefit estimates.

*Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* National Research Council,Division on Engineering and Physical Sciences,Board on Energy and Environmental Systems,Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2,2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain

configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
