La Palabra Justa Sharon Adelman Reyes, Salvador Gabaldon, Jose Severo Morejon, 2014-04-02 Language proficiency is multidimensional. While conversational skills are essential for social interaction, they are insufficient for most academic purposes. To be successful, teachers and students must acquire a firm and accurate command of subject-area vocabulary. Even though a growing number of Americans speak Spanish at home, the United States has a severe shortage of professionals with fully developed academic skills in Spanish. This poses a special challenge for bilingual classrooms. Educators must be able to identify la palabra justa - the right word - in preparing or presenting a lesson, especially when providing content instruction and second-language input at the same time. Recognizing an acute need, the editors of this volume brought together an international team of language teachers, teacher educators, and other bilingual professionals to create an English-Spanish / Espanol-Ingles glossary. La Palabra Justa features more than 24,000 entries covering the academic vocabulary needed in K-12 education. Unlike a dictionary, the glossary offers a quick, user-friendly way to find translations of key terms in context. Sections include: Language Arts (Grammar & Composition, Literature, and Languages); Mathematics (Arithmetic & Algebra, Geometry, Probability & Data Analysis, Numbers & Measures); Science (Earth Sciences,

Life Sciences, Physical Sciences, and Inquiry & Process); Social Studies (Civics & Government, Economics & Finance, Geography, and History); Fine Arts (Performing Arts and Visual Arts); Technology; and School Life (Holidays & Celebrations, School Routines & Activities, Field Trips & Transportation, School Library, Playground & Sports, Student Health, Special Needs, Conduct & Discipline).

Experience Curves for Energy Technology Policy Organisation for Economic Co-operation and Development, International

Energy Agency,2000 The fact that market experience improves performance and reduces prices is well known and widely exploited in technology-intensive industries, but sparsely used in analysis for energy technology policy. Knowledge of the experience effect can help in the design of efficient programmes for deploying of environment-friendly technologies. The effect must be taken into account when estimating the future costs of achieving targets, including targets for carbon dioxide reduction. This book discusses issues raised by the experience effect, such as price-cost cycles, competition for learning opportunities in the market, risk of technology lockout and the effects of research, development and deployment policies on technology learning. Case studies illustrate how experience curves can be used to set policy targets and to design policy measures that will encourage both investment in and use of environment-friendly energy technologies. Low-cost paths to stabilising CO2 emissions are explored.
