**Electronic Principles** Paul E. Gray, Campbell L. Searle, 1969-01-15 This book begins with the physical principles involved in the operation of semiconductor components, proceeds through the physical electronics, modeling, and circuit characteristics of these components, and engages the questions and problems that arise in the computer-aided design of complex multicomponent functional assemblies of the type found in modern integrated-circuit packages.

**Polyhydroxyalkanoates** Harvey Williams, Patricia Kelly, 2018 Polyhydroxyalkanoates: Biosynthesis, Chemical Structures and Applications opens with an exposé on employing extremophiles as polyhydroxyalkanoate (PHA) producers. The authors suggest that extremophiles may be easily subjected to a long-term continuous cultivation processes, which considerably enhances overall productivity while reducing the energy demand in biopolymer production. Conversely, a range of challenges remain, including improving the metabolic capability of extremophiles, recycling of fermentation broth, various process engineering aspects, and adaptation of bioreactor materials and process controlling devices to conditions shortening their life span. Following this, the enzymes, regulators and genes involved in PHA biosynthesis are analyzed for their potential as an alternative to synthetic polymers. They are synthesized as intracellular carbon and energy storage compounds from over 300 species in the presence of excess carbon and under oxygen, nitrogen or phosphorus limitation, or after pH shifts. This collection goes on to suggest PHA as a promising alternative for petrochemical compounds. The challenges of increasing economic feasibility in the global market, minimizing costs, and improving the polymer yield are reviewed. Additionally, recent research on structural variations of PHAs has been centered on the design, biosynthesis, and properties of biodegradable and biocompatible materials, which can be used for bioengineering. This collection also includes a focus on the roles of polyhydroxyesters and PHAs in the construction of tissue engineering scaffolds, which are used in bone, cartilage, ligament, skin, vascular tissues, neural tissues and skeletal muscles. Their exceptional properties, such as high surface-to-volume ratio, high porosity with very small pore size, and biodegradation have made them gain a lot of attention in this field. The biomedical applications of PHAs are explored, including in-vivo implants, tissue engineering, anticancer agents, drug delivery, biocontrol agents and memory enhancers, as their low acidity allows for minimal risk in usage. In order to enhance its applicability in various fields, the blends and nanocomposites of PHAs are studied and their potential challenges, applications and opportunities are addressed. After which, the industrial and agricultural applications are described, with specific focus on potential applications of PHAs in packaging. Other applications include moulded goods, paper coatings, non-woven fabrics, adhesives, films and performance additives. Recent advances in this area, by means of peer-reviewed literature and patents, are introduced and discussed. Moreover, innovative strategies for the synthesis of novel polymer blends, adequate for food contact applications, are presented.

**The Thousand and One Borders of Iran** Fariba Adelkhah, 2015-09-16 A country marked by controversy, Iran's social, cultural and political dynamics are too often reduced to a few misleading clichés. Islamism is widely considered to shape all social relations in Iranian society and, while Iranian society is indeed Islamic, this term's multiple meanings in everyday life and practices go far beyond the naïve and monolithic idea we are used to. The Thousand and One Borders of Iran analyses travel as a social practice, exploring how diasporas, margins and so-called peripheries are central in the construction of a national identity and thus revealing the complexities of Iranian history and society. Written by a leading anthropologist, it draws upon fieldwork carried out in Iran and Iranian migrant communities across Dubai, Tokyo and Los Angeles from 1998 to 2015. While casting new perspectives on the place of transnational relations in an increasingly globalized world, this work also sheds new light on the evolution of Iranian society, countering the explanation furnished by nationalist ideology that has been reproduced by the Islamic Republic itself. Its unique approach to the analysis of Iranian society through the theme of travel and borders considers the links and even the quarrels between the centre of Iranian society and the periphery, and the foreign elements that have contributed to society's development. Travel is key to these interactions and, following the travels of merchants and workers, students or the faithful, elected officials and experts, or exiles and refugees, this book offers an anthropological study of travel that re-thinks Iranian history and national identity. This book would be of interest to students and scholars of Iranian Studies, Middle Eastern Studies and Anthropology.

**Make: Electronics** Charles Platt, 2015-08-10 This is teaching at its best! --Hans Camenzind, inventor of the 555 timer (the world's most successful integrated circuit), and author of *Much Ado About Almost Nothing: Man's Encounter with the Electron* (Booklocker.com) A fabulous book: well written, well paced, fun, and informative. I also love the sense of humor. It's very good at disarming the fear. And it's gorgeous. I'll be recommending this book highly. --Tom Igoe, author of *Physical Computing and Making Things Talk* A magnificent and rewarding book. ... Every step of this structured instruction is expertly illustrated with photos and crisp diagrams. . . . This really is the best way to learn. --Kevin Kelly, in *Cool Tools* The first edition of *Make: Electronics* established a new benchmark for introductory texts. This second edition enhances that learning experience. Here you will find unique, photographically precise diagrams of breadboarded components, to help you build circuits with speed and precision. A new shopping guide and a simplified range of components, will minimize your investment in parts for the projects. A completely new section on the Arduino shows you how to write properly structured programs instead of just downloading other people's code. Projects have been reworked to provide additional features, and the book has been restructured to offer a step-by-step learning process that is as clear and visually pleasing on handheld devices as it is on paper. Full color is used throughout. As before, *Make: Electronics* begins with the basics. You'll see for yourself how components work--and what happens when they don't. You'll short out a battery and overheat an LED. You'll also open up a potentiometer and a relay to see what's inside. No other book gives you such an opportunity to learn from real-life experiences. Ultimately, you will build gadgets that have lasting value, and you'll have a complete understanding of how they work. From capacitors to transistors to microcontrollers--it's all here. Hans Camenzind, inventor of the 555 Timer (the world's most successful integrated circuit chip), said that This is teaching at its best! when he reviewed the first edition. Now the second edition offers even more!
