Automata and Mechanical Toys Rodney Peppé,2004

Automata and Mechanical Toys Mary Hillier,1988 This book deals with the evolution of mechanical toys following on the history of automata from very early times.

Making Moving Toys and Automata Robert Race,2018-10-23 This beautiful book draws on Robert Race's extensive collection of traditional moving toys, looking at the ways the makers have achieved remarkable and varied results, often with very limited resources. Each chapter begins by looking at the mechanisms and materials used in some of these traditional moving toys, goes on to consider possible variations, and describes how to make a related moving toy. It continues, from this basis, to develop a design for an automaton. The book shows that designing and making these simple but wonderfully satisfying mechanical devices is fun, and that good results can be achieved in many different ways, using a variety of materials, tools and equipment such as wood and wire, card and paper, bamboo, string, tin plate and feathers. It exploits, in a simple way, mechanisms such as levers, linkages, cranks and cams. It explores different ways of moving those mechanisms directly by hand, by springs or falling weights, and by the wind. Beautifully illustrated with 117 colour images.

Creative Kinetics Rodney Frost,2022-05-03 Make Your Own, Amazing Moving Art! Have you ever wanted to create your own moving-part toy or mechanism but weren't sure where to start? Now you can easily build fascinating kinetic structures and simple machines with this do-it-yourself guide to making art in motion. Master craftsman Rodney Frost shares his wealth of knowledge with clear explanations and easy-to-follow instructions, building from simple to more complex projects to help you quickly absorb the lessons and build your skills. Frost keeps the concepts relatable, the materials accessible, and the projects doable. Simple illustrations help explain how basic mechanisms work, including cams, cranks, levers, pulleys, gears, and flywheels. In the skill-building simple projects, Frost suggests making the models with inexpensive household items, such

as cardboard and string, before beginning construction with wood. Although the book consists primarily of projects for beginners and those with a desire to learn the basics of mechanical constructions, the much-beloved Creative Kinetics has nevertheless become a valued resource for hobbyists of all ages and experience levels. The simplified projects explained here provide excellent opportunities to learn the fundamental components and functions of more complicated creations, making this book a helpful and inspiring springboard for exploration of more advanced artwork and sculptures.

The Invention of Hugo Cabret Brian Selznick, 2015-09-15 Don't miss Selznick's other novels in words and pictures, Wonderstruck and The Marvels, which together with The Invention of Hugo Cabret, form an extraordinary thematic trilogy! 2008 Caldecott Medal winner The groundbreaking debut novel from bookmaking pioneer, Brian Selznick! Orphan, clock keeper, and thief, Hugo lives in the walls of a busy Paris train station, where his survival depends on secrets and anonymity. But when his world suddenly interlocks--like the gears of the clocks he keeps--with an eccentric, bookish girl and a bitter old man who runs a toy booth in the station, Hugo's undercover life and his most precious secret are put in jeopardy. A cryptic drawing, a treasured notebook, a stolen key, a mechanical man, and a hidden message from Hugo's dead father form the backbone of this intricate, tender, and spellbinding mystery. With 284 pages of original drawings and combining elements of picture book, graphic novel, and film, Brian Selznick breaks open the novel form to create an entirely new reading experience. Here is a stunning cinematic tour de force from a boldly innovative storyteller and artist.

Animating Empire Jessica Keating, 2018-05-09 In the sixteenth and seventeenth centuries, German clockwork automata were collected, displayed, and given as gifts throughout the Holy Roman, Ottoman, and Mughal Empires. In Animating Empire, Jessica Keating recounts the lost history of six such objects and reveals the religious, social, and political meaning they held. The intricate gilt, silver, enameled, and bejeweled clockwork automata, almost exclusively crafted in the city of Augsburg, represented a variety of subjects in motion, from religious figures to animals. Their movements were driven by

gears, wheels, and springs painstakingly assembled by clockmakers. Typically wound up and activated by someone in a position of power, these objects and the theological and political arguments they made were highly valued by German-speaking nobility. They were often given as gifts and as tribute payment, and they played remarkable roles in the Holy Roman Empire, particularly with regard to courtly notions about the important early modern issues of universal Christian monarchy, the Reformation, the Counter-Reformation, the encroachment of the Ottoman Empire, and global trade. Demonstrating how automata produced in the Holy Roman Empire spoke to a convergence of historical, religious, and political circumstances, *Animating Empire* is a fascinating analysis of the animation of inanimate matter in the early modern period. It will appeal especially to art historians and historians of early modern Europe. E-book editions have been made possible through support of the Art History Publication Initiative (AHPI), a collaborative grant from the Andrew W. Mellon Foundation.

Malamander Thomas Taylor, 2019-09-10 A quirky, creepy fantasy set in Eerie-on-Sea finds a colorful cast of characters in hot pursuit of a sea monster thought to convey a surprising gift. It's winter in the town of Eerie-on-Sea, where the mist is thick and the salt spray is rattling the windows of the Grand Nautilus Hotel. Inside, young Herbert Lemon, Lost and Founder for the hotel, has an unexpected visitor. It seems that Violet Parma, a fearless girl around his age, lost her parents at the hotel when she was a baby, and she's sure that the nervous Herbert is the only person who can help her find them. The trouble is, Violet is being pursued at that moment by a strange hook-handed man. And the town legend of the Malamander — a part-fish, part-human monster whose egg is said to make dreams come true — is rearing its scaly head. As various townspeople, some good-hearted, some nefarious, reveal themselves to be monster hunters on the sly, can Herbert and Violet elude them and discover what happened to Violet's kin? This lighthearted, fantastical mystery, featuring black-and-white spot illustrations, kicks off a trilogy of fantasies set in the seaside town.

Edison's Eve Gaby Wood, 2003-07-08 During the eighteenth century, the inventor Jacques de Vaucanson created a mechanical duck that seemingly could digest and excrete its food. A few decades later, Europeans fell in love with "the Turk," a celebrated chess-playing machine built in 1769. Thomas Edison was obsessed for years with making a talking mechanical doll, one of his few failures as an inventor. In our own time, scientists at MIT are trying to build a robot with emotions of its own. What lies behind our age-old pursuit to create mechanical life? What does this pursuit tell us about human nature? In *Edison's Eve* Gaby Wood traces the history of robotics, from its most brilliant inventions to its most ingenious hoaxes. Joining

lively anecdote with literary, cultural, and philosophical insights, Wood offers a captivating and learned work of science and history.
