Functional Assessment for Adults with Disabilities National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Care Services,Committee on Functional Assessment for Adults with Disabilities,2019-08-31 The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is the inability to engage in any substantial gainful activity [SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive) functional abilities relevant to work requirements. This report discusses the types of information that support findings of limitations in functional abilities relevant to work requirements, and provides findings and conclusions regarding the collection of information and assessment of functional abilities relevant to work requirements.

Analysis of Neurogenic Disordered Discourse Production Anthony Pak-Hin Kong,2022-03-07 Analysis of discourse production among speakers with acquired communication disorders is an important and necessary clinical procedure. This book provides a comprehensive review and discussion of aphasia and its related disorders, their corresponding clinical discourse symptoms that speech-and-language pathologists should address, and the different methods of discourse elicitation that are clinically and research oriented. This edition has been thoroughly updated throughout to include the latest research, including advances in word retrieval and discourse production, cognitive and multicultural aspects of disordered discourse production, application of technology to understand and evaluate spoken discourse, and evidence-based intervention of discourse impairments. Contemporary issues related to disordered/clinical discourse elicitation are added. Recent advancement in discourse analysis is covered and discussions of various treatment options of discourse symptoms are provided. Finally, the manifestation of discourse symptoms as a function of speakers' multilingual/multi-cultural status and specific considerations related to clinical assessment and remediation are explored. As the only introductory text to include comprehensive coverage of basic knowledge of neurogenic disordered discourse, it is a must-read for students, clinicians, and researchers in various fields. Readers will also benefit from plenty of examples that provide a connection between the theoretical contents presented in the text and application to real-life contexts of discourse production.
